

Claims

1. A commodity containing apparatus characterized in including a charging member attached to a base portion for charging a plurality of sheets of containing bags, and a pivoting base portion pivotably supported by the base portion in a vertical face and formed with an opening for throwing in a commodity at a center portion thereof, wherein an end plate of the pivoting base portion opposed to the charging member presses to hold the plurality of sheets of containing bags.
2. The commodity containing apparatus according to Claim 1, characterized in that the pivoting base portion is provided with a lever pivotably supported in a vertical face and an expanding arm inserted into an opening of a frontmost one of the containing bag charged to the charging member for expanding the containing bag when the pivoted lever recovers to an original position by a self weight thereof is supported by the lever.
3. A commodity containing apparatus characterized in a commodity containing apparatus fixed to a fixing member of a counter or the like of a store for expanding a containing bag and throwing a commodity thereinto to contain, wherein the commodity containing apparatus includes a fixed member fixed to the fixing member, a base portion engaged attachably and detachably to and from the fixing member, a charging member

attached to the base portion for charging a plurality of sheets of the contacting bags, a pivoting base portion pivotably supported by the base portion in a vertical shape, formed with an opening for throwing in the commodity at a center portion thereof, an end plate thereof opposed to the charging member pressing to hold the plurality of sheets of containing bags, and a lever pivotably supported by the pivoting base portion in a vertical face and arranged with an expanding arm inserted into an opening of a frontmost one of the containing bag charged to the charging member for expanding the containing bag when the expanding arm is pivoted and thereafter returns to an original position by a self weight thereof.

4. The commodity containing apparatus according to Claim 3, characterized in that the fixed member is formed with a hook portion, a lock shaft extended in a longitudinal direction engaged with the hook portion of the fixed member is movably arranged at the base portion, and the lock shaft is arranged with a spring for providing an elasticity in a direction of the hook portion of the fixing member.

5. The commodity containing apparatus according to any one of Claim 1 through Claim 4, characterized in that at least two sheets of end plates surrounding the opening for throwing in the commodity are inclined downward toward a center side.

6. The commodity containing apparatus according to any one of Claim 1 through Claim 5, characterized in further including

a holding frame fixed to the base portion and formed with a fold-to-bend portion hung downward in a vertical direction of the base portion and folded to bend in a horizontal direction such that a lowermost portion thereof is disposed downward from the plurality of sheets of containing bags, and a receiving bowl arranged at the fold-to-bend portion of the holding frame.
